Slicer Dashboard

A slicer in a dashboard, especially in power Bi is a visual filter control that allows users to easily filter and interact with data displayed in reports. It provides a user-friendly way to narrow down data by selecting values – for example, choosing specific dates, categories, or regions-directly on the report canvas.

CT- 1. Stacked column chart

3. Tile slicer

4. Dropdown slicer

5. Between slicer

Insights:

1. The sum of profit generally increased from late 2013 into 2014, with the highest monthly profit visible in July 2014(0.39M)
2. Lower profit months included September 2013(0.05M), December 2013(0.11M), April 2014(0.11M), and September 2014(0.04M)
3. Most month in 2014 showed profits above 0.15M, indicating improved performance compared to many months in 2023.

4. Filters for Country, Segment, Date range, and Discount Band allow for targeted analysis. For example, users can select specific regions (Canada, France, Germany, Mexico) or segments like Enterprise and Small Business to see how profits change
5. The Date slicer reveals trends and seasonality, showing which months perform best.
6. In this visual we can check details individual.
    Exp: Country wise profit,segment wise profit,date or discount wise profit.
